ABSTRACTED- PUB- NO: RD 282006 A

BASIC- ABSTRACT:

Packaging containers are made from a multilayer polymeric laminate contg. a gas barrier layer consisting of a copolyester-amide from 2,2'-(1,3-phenylenedioxy) diacetic acid, ethylene glycol and m-xylylene diamine (PEPS), which is made as described in US4501879.

USE/ ADVANTAGE - The multilayer laminates generally have the PEPS layer as a core layer surrounded by outside layers of materials commonly used in the packaging industry such as polyesters, polycarbonates, polyolefins, elastomeric materials, PVC or polystyrenes. The laminates are made e.g. by coextrusion, coinjection, etc., and can be shaped by conventional means into trays, jars, bottles, and other containers for the food and beverage industry, coextruded pipes, etc. having good gas barrier properties. Blends of PEPS with other polymers may also be used in the prodn. of monolayer structures for use in

packaging, or coatings of PEPS can be applied e.g. from methylene chloride soln. to polyester or other containers to provide gas barrier properties.

TITLE- TERMS: PACKAGE CONTAINER CONTAIN CO  
POLYESTER AMIDE GAS BARRIER  
INTERLAYER DIACETIC ACID ETHYLENE  
GLYCOL METAXYLENE AMINE

ADDL- INDEXING- TERMS: PHENYLENE PEG POLYETHYLENE DIOXY
